1. Executive summary

Our company equipped learning machines with exclusive educational software system, containing high-quality education courses. We open an offline store renting learning machines and charging by hour. We have private and independent study rooms, as well as single-table classrooms where many people study together. Students with different needs can choose freely.

Due to the annual increase in the number of high school and college entrance examinations, in order to find the “best tuition teachers” for their children, parents may choose tuition classes from different institutions, which do take a lot of time on the road. Then, students' demand for online learning resources is increasing. Therefore, the purpose of our company was born. We hope to help students and parents so that they do not need to worry about expensive learning machines, spend more time on the road and online learning resource apps with varying prices. Also it is not limited to the courses of the high school and college entrance examination, but within a limited time, you can freely choose a rich variety of improvement courses (including the university certificate courses, TOEFL, etc. that will be gradually added). By renting our company’s unique learning machine, students do not need to spend a lot of time searching and comparing online or offline subjects and various types of teachers, they can directly find the subjects they need and start learning, so as to maximize learning efficiency.

Compared with the online apps and learning machines, which have the strongest competition for our company, we have a comfortable offline store for students to conduct high-quality learning in a place with a strong learning atmosphere, and do not need to spend a lot of time on their own to compare and select the courses they need. As for the offline class, students cannot suspend such an instant course. Our learning machine allows students to adjust the course progress by themselves through convenient functions such as the pause button, the retract button, and the accelerator button, which greatly improves the learning efficiency.

For the learning machine market, the core advantage of our company is special and independent. We are different from the industry that sells learning machines, offline tutoring institutions and the industry that sells online learning courses. This is an important impact we have on the online and offline learning resource industry, and it is also the special demand of another type of learning population that we hope the society will see and value.

2. Business description

1. Business Overview

A learning machine rents an offline experience store. Students can have a separate space to study in the store. We will provide a learning machine with online course resources. Students can learn according to their own needs.

2. Summary of enterprise model

Under the background of big data, online education can make students enjoy higher education conveniently; Under the background of fierce competition, learning resources should be balanced. So that students in key schools or non key schools can enjoy better education.

3. Business particularity

There are no similar enterprises in the market. Online education and learning machine self-study are popular in the market. And our enterprise is the combination of these two services. Students don't need to spend money on learning tablets or online courses. In our experience store, they can enjoy online course resources and study alone in a quiet environment. At the same time, our enterprise has also done what other online learning institutions can& apos; It do - supervise students& apos; learning, and freely choose the content and progress of lectures.

4. Premise of business success

1> Social background: in the era of big data, online education has gradually occupied the market, and the competition among college entrance examination students is fierce.

2> Resource source: online course resource is an important factor to attract customers. We can make use of the popularity of college students to attract more students and parents.

3> Particularity: our enterprise can guarantee the learning efficiency of students, single unit single room, while using the learning machine, you can choose the content of lectures.

5. Corporate vision

1> Good competitive environment

2> Honest customers: online course resources are our weapon to win, so we need customers& apos; integrity and enterprise supervision to ensure the patentability of resources.

6. Mission statement:

1> The source of online course is legal and the information of the instructor is true.

2> Strive to benefit the public with educational resources, so that all students can equally hear better online classes

7. Smart company objectives

Financial target: cost recovery in three years and branch opening in five years (please refer to financial plan for details)

Social goal: to alleviate the unequal distribution of educational resources in one year, so that students who failed to become key universities can enjoy the same teaching.

Word of mouth goal: a year and a half in the surrounding schools have a good reputation and a certain customer base.
Utility Objective: to record the ups and downs of the students& apos; scores in the sprint stage of the college entrance examination, improve the students& apos; scores in the first year, and at the same time publicize it.

3. Industry and Market analysis

3.1. Online education market size

If we exclude the market where the epidemic forces the teaching scene to be online while the offline classes will still return to offline after resuming, the market size of China's online education will be about RMB 400.38 billion in 2020, up 24.1% year-on-year.

3.2. Number of buyers

After the questionnaire was issued(See Appendix for details), we know that 83.33% of students like to use online course resources, and 68.52% of the students who are willing to rent learning machines, which shows that enterprises are very popular with students; The proportion of parents willing to consume is 76.85%, which also shows the size of the buyer market.

3.3. Market growth and profitability of learning machine industry

According to data released by IDC, China's student learning machine market shipped approximately 4.1 million units in 2019. It is estimated that it will be close to 4.4 million units in 2020 and will reach 4.7 million units in 2021. Regarding the profitability of this industry, according to statistics, the total assets of the learning tablet industry in 2020 was 146.2 billion, revenue was 186.8 billion and net profit was 6.76 billion.

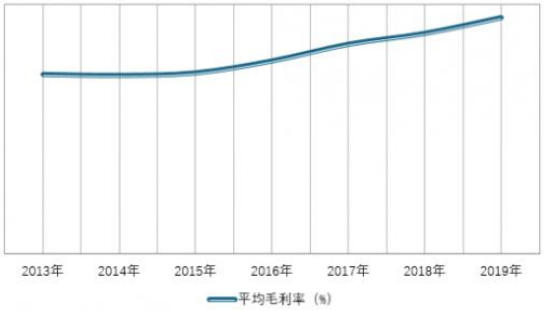

Figure 3-1:Change of average gross profit rate of learning machine industry from 2013 to 2019

1. Market scope

The market includes online and offline markets.

Online market (secondary market): free online course materials available on the Internet, institutions that hold live online courses, and institutions that record online courses.

Offline market (main market): various training institutions (such as New Oriental Education & Technology Group, etc.), tutoring by school teachers.

2. Business location

Complete offline learning resources are mostly concentrated in first and second tier cities, while there are fewer offline resources for second and third tier cities, rural areas and townships. For students in these locations, online resources can only be obtained through smartphones and computers. Therefore, the initial location of our company should be set in the second and third tier cities, and at the intersection of

many local middle and high schools. In this way, we can attract more customers in a market environment with less competitive pressure.

3. Market growth potential

(1) The learning machine market has a very large demand.

Many parents of students are very concerned about their children's performance and hope that they can get higher scores in every exam. Therefore, consumers have a very large demand, and many manufactures have also seen this business opportunity. Since decades ago, many manufactures have participated in the electronic education market. Even though market competition has always been fierce, the potential of the market is still explosively growing.

(2) Continuous growth of student learning machine shipments.

The student learning machine is mainly for K-12 student users, attracting parents and student groups through rich learning resources and learning functions. Also, it is more suitable for home learning scenarios. The student learning machine market has shown continuous growth trend, with a compound annual growth rate of 6.16% from 2017 to 2021. The demand for student learning machine is strong seasonally. The shipments during the winter and summer vacations will increase significantly.

(3) Technology growth.

In the past five years, relevant laws and policies have been promulgated one after another, and the technological research and development level of learning machine companies has been continuously improved. With the introduction of AI technology, learning machines have emerged more intelligent and personalized learning methods. The learning machine pays more attention to the application of learning resources and teaching strategies than other mobile terminals. The ability to learn on-board communications is also constantly being strengthened, from the original inability to communicate and update the information to copy resources from the computer through the data cable, and then use wireless communication to automatically update the information.

(4) Learning machine prices continue to rise

Display modules and components, memory, main control and supporting chips, structural parts, batteries and other raw materials are the most direct components of the learning machine. The price of raw materials directly affects the production cost of the learning machine. In 2020, the main direct materials of the learning machine have risen one after another, and it is expected that the rising market will continue in 2021, which will drive the price of learning machines to continue to rise. As of the first half of 2020, the average price of educational learning machine was RMB 1,521.41 per unit. Compared with 2019, the price increased by RMB 213.08, the increase was as high as 16.29%.

3.4. Market segmentation

After evaluating the major markets for online education, the Famous School Chop-Circulation Course platform has broken them down into four categories, taking into account the market environment.

(1) Age, which is divided into: primary and secondary school students, high school students, university students, postgraduate students and adults according to their age.

According to the age of the customer can be provided with the required services.

(2) Course sources, because Famous School Chop is providing rental services, online course resources are an important criterion for customers to choose. The main sources of courses are: recorded videos of tutorials, videos of lectures by university teachers. Some customers just need a simple explanation of the course while others are to improve themselves, so they will choose different sources of video.

(3) Learning needs, social competition is gradually becoming fierce, people may choose to get different documents or wish to master a skill quickly, while some people are for their own studies. Therefore it determines whether people need a quick or solid education.

(4) Training content, depending on the learning stage, the learning stages can be divided into: synchronous courses, upgrading courses, high school entrance exams sprint, adult entrance exams, vocational skills, language study abroad ..... By breaking down the learning stages you can target your customer needs.

Circulation course platforms focus on gaining benefits by renting learning machines and providing online course resources. Based on the company's own resources as well as strategic objectives, after assessing these four main segments, Famous School Chop chose students for the SSCE sprint among the major segments.

According to the social context, Chinese education is highly competitive and parents have strong expectations when it comes to their children's education and are willing to invest more money for their children, especially for SSPA students. In particular, the number of SSPA students is growing every year and so is the need for extra-curricular tutoring, so we are targeting the SSPA sprint market, mainly based on the number and nature of the audience.

3.5. The reason of choosing the Market segmentation and the possibilities for service.

(1) The number of students taking the college entrance exams and the number of junior high school students in school are both trending upwards nationwide, and the expansion of the size of the target group offers more possibilities for service. This can be seen in Figure 4-1 and Figure 4-2 below:

Figure 4-1 Data source: Ministry of Education.Figure 4-2 Data source: Education.com

(2) Problems arise in contemporary society: high score lines, increasing competition, many middle and high school examinations with a heavy burden on candidates, and the pursuit of higher education rates. The selective examinations are designed to maintain a certain level of distinction between candidates' performance, which leads to low-scoring students eager to find a quick way to advance and high-scoring students wishing to improve themselves. According to the current state of society,

there would be more room for growth if companies were geared towards middle and high school candidates.

(3) Parents' urging, although the circulation course platform serves the students, but the consumption is the students' parents. The Chinese people are one of the most important people in the world in terms of reading and education of their children. Many parents are concerned about their children's academic performance, but in terms of supervising their children's learning is often to impractical, so parents will look for relevant educational institutions.

3.6.Where to cut through the market opportunity analysis

(1) Students are eager to learn independently and have flexible control over their time. Unlike traditional tuition, Famous School Chop allows students to choose their own learning content, avoiding wasted time. They can also make appointments to study at any time.

(2) Parents are anxious, as the SSC exams are an important stage in the education process, and parents can be anxious if their grades are not as good as they should be. The school's famous chopping block ensures that students have access to learning resources, while the new educational approach can attract parents' attention.

3.7. Risk estimation and solutions

(1) Learning machine resources barriers

The establishment of a perfect terminal marketing network for the learning machine industry is the most important way of sales. However, the construction of marketing networks requires huge capital and time costs. In addition, high-quality store resources are the focus of competition among enterprises, often relatively scarce. Existing brands have higher brand awareness than new brands, easier access to high-quality store resources. At the same time, existing brands have greater bargaining power in sales channel cooperation, which creates channel barriers for new entrants.

(2) The process of building brand reputation

For existing brands, they already have a stable customer base. Apart from exceptional circumstances, it is difficult to influence their financial commitment to the company (students generally choose stable teachers and provide long-term tutoring). So as a new company, we don’t have public praise and a customer base.

(3) Resource leak

The most important part of our company’s competitive advantage is the uniqueness of learning resources. We should enter into confidentiality agreements with the agencies or teachers that provide the learning resources for us to prevent copyright from appearing on any pirated platform. If so, it can lead to resource leakage and make us lack competitive advantage.

4. Competitive Analysis

1. Competitors

(1) Direct competitors

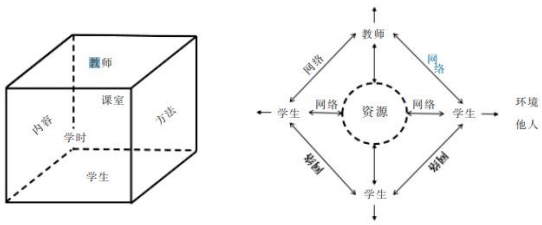
In view of the fact that companies charge customers for renting learning machines, their direct competitors are other learning machine companies (such as iFLYTEK). In the SWOT analysis, the company's advantage lies in the choice of geographic location-second and third-tier cities lacking offline resources and the intersection of middle and high schools. This will have more opportunities than other companies that rent learning machines. Take HKUST Xunfei as an example. While pre-sales new learning machines, it also provides services of 100 to 400 for the first release and free software upgrades for life. The disadvantage of enterprises is that they have too little funds-300,000 RMB is far from enough. We can only borrow money from people around us to stay competitive, but this also exacerbates the financial burden. In our daily life, we can use existing electronic products, such as mobile phones, computers, TVs, and so on to carry out similar learning.

(2) Ordinary competitors

This type of competition is more extensive, such as pure offline teacher tutoring, pure online teacher tutoring and online lesson apps.

① Pure offline teacher tutoring (such as New Oriental) usually introduces school teachers. Therefore, the advantage of offline compared with online is that it can be closely integrated with school content, thereby increasing the absorption rate of primary and middle school students in the school. Its disadvantage is that it is subject to the influence of objective factors (such as epidemic situation, site selection, etc.). As a traditional teaching method, the opportunity for purely offline teacher tutoring lies in its stable management process.

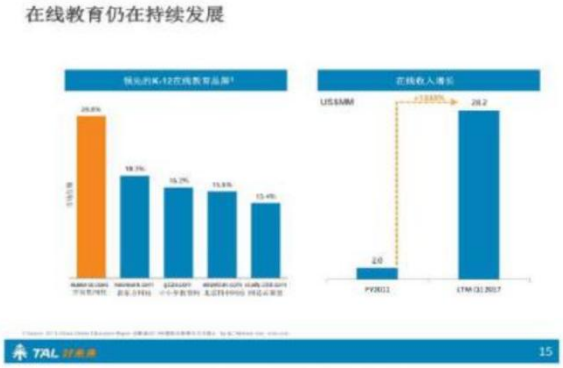
② Pure online tutoring usually provides some materials for elementary and middle school students to learn.



课堂教学　　在线教学

Different from the teacher→student structure in the previous classroom, online education is more based on resource sharing, connecting resources with teachers and students through the network. The advantage of online education is that it is not

affected by objective factors. The popularization of electronic products has given birth to the online education industry. Another advantage is its timeliness. When primary and secondary school students have electronic products, they can selectively listen to online live broadcasts according to their strengths and weaknesses. The disadvantage is that it is impossible to guarantee the student's listening status. Students may appear to sleep in front of the screen. Attendance efficiency may not be guaranteed. In addition, online education mainly relies on the stability of electronic equipment. The opportunity for online education lies in its particularly large market size. Take Xueersi Online as an example, its revenue in 2017 is expected to increase to more than 13 times that in 2011.



③As a brand organization, online source apps (such as XES online school) compete through brand marketing and price wars. Its biggest advantage lies in its financial status and brand image. Online course companies use advertising channels to make their famous teachers known to passers-by, especially primary and middle school students. In this way, the online course app has an advantage over other competitors. The online school has increased their knowledge reserves. The threat lies in the teacher's uncertainty. Most students may make a choice based on the teacher. If teachers leave the online school, it will inevitably have an impact on the operation of the online school. Therefore, in order to ensure the advantages of online schools, we should attract famous teachers to settle in, and we should keep close to the content of the classroom.

2. Competitive analysis

It can be seen that in order to increase our competitive advantage, in addition to the factors of location and funding, we need to consider students more and improve the quality of courses on the one hand. For example: we can speed up the update of resources according to existing examination requirements and adapt to the school's offline teaching resources. In this way, learning machine resources can be connected with school teaching and examination requirements. There is also a process of learning efficiency acceptance. Therefore, we can have several tutors, on the one hand, explain the use of learning machines to enhance the freshness of primary and middle school students; on the other hand, we can guarantee the improvement of primary and

secondary school students’ learning efficiency.

5. Marketing Strategy and implementation

5.1.Service Strategy

5.1.1. Service orientation

(1) Building core courses

The core course of this product lies in all the courses involved in the college entrance examination. In the comprehensive output of knowledge, but also to create a high-quality awareness of the enterprise in the target population. In addition to the traditional school knowledge transfer, our enterprise products also have quick courses and intensive courses. The accelerated course is specially designed for examination. We have students from famous schools with high scores as teachers to remind us of breakthroughs. The intensive course is specially designed for the marking questions in the examination. High score students have a unique way to solve the problem.

(2) Develop attractive new projects

It adopts one person one account design, each user has a unique account, and each login is based on the user's account to show the courses in different accounts.It adopts the design of one person and one room. Each user can enjoy the single room service during the use of learning tablet, which can realize non-interference learning and improve learning efficiency.

(3) Continuously improve the added value of products

Our course for a knowledge point explanation, not only provides a solution. Diversified learning ideas not only meet the user's intake of knowledge points, but also exercise their thinking ability, ability to think from multiple angles and ability to learn by analogy.

5.1.2. Brand and product service

(1) brand

Good corporate image can not only bring good social benefits to enterprises, but also bring good economic benefits to enterprises.

In the enterprise naming, we choose "famous school chop" as our enterprise name, but also the name of the product“ "Famous school" means that we take famous school as our customer's goal, "chop" means to pass“ "Famous school chop" implies praise to consumers, but also implies that we can easily pass through famous schools with our products.

(2) service function

① Synchronous learning materials.
② Unique curriculum resources.
③ Efficient handwriting design.
④ Eye screen design.
⑤ General practice barrier free learning.

5.1.3. Product service innovation and product line planning

(1) Product innovation

With the development of today's education, our knowledge base and question base are constantly changing. In terms of product objectives, establish enterprise product information feedback and innovation system. In terms of information feedback, the customer's feedback every semester, according to the feedback to deal with the problems of the product and timely update; In the innovation system, the real-time update system is adopted to continuously improve the product function and teaching level.

(2) Product line planning

First, further diversification of products and services. Second, after the maturity of the curriculum products for middle school students, our enterprise's products will gradually expand the target user group, not only junior high school education, but also primary and adult education system.

5.1.4. Product life cycle management

(1) Cultivation stage

We will adopt the trial period mode, each user has the right to enjoy the trial, and decide whether our product is suitable for them according to the trial feeling.

(2) Growth stage

We will gradually expand from 5 to 10-20, and adjust the learning environment at the same time. At this time, we need to do a good job in product sales forecast to ensure the supply of products. \

(3) Mature stage

We need to increase the promotion efforts, intercept consumers, and achieve sales. Service marketing should also do a good job, let consumers release consumption, appropriate price adjustment, play a role in consolidating and attracting consumers.

(4) Recession stage

It is necessary to quickly delete the declining courses, and do a good job in the cycle of curriculum management.

5.2.Price Strategy

5.2.1. Reasonable pricing of products

	Weekday	Weekend	vocation
One hour	100	100	100
One day	200	500	500
One week	1500	1500	3000
One month	6000	6000	12000
One semester	30000	30000	
One year	50000	50000	

5.2.2 Product price strategy

(1) Penetration pricing

It mainly depends on the price war to win the market. After gaining a certain sales share in the market, it can increase the product price according to the market situation. This pricing method can improve the market share and reduce the marketing cost of enterprises. Two months before opening, 6.6% discount will be adopted to face all class hours.

(2) Daily low price (EDLP)

Two months before and after opening, discount pricing will be adopted. Every day, the organization will issue 10 coupons of 200-30 or more and 10 coupons of 8.8% discount, valid for 20 days, starting from the same day.

(3) Differential pricing

In the process of price setting, we should realize the differentiation between VIP customers and ordinary customers, and set different prices for different user groups. VIP users: open monthly and above class hours; Ordinary users: purchase in a single period of time.

(4) Portfolio pricing

Because users are more sensitive to the price, users with more time can provide other services, such as giving synchronous course handouts and providing self-study space in addition to renting tablet time. Compared with other products, this special combination can further promote the sales transformation of products.

5.3.Distribution Strategy

5.3.1. Marketing channel development

(1) Direct channel

When the students are close to the winter and summer vacation, the staff of the organization can distribute leaflets near the school to expand the popularity of the organization and attract customers. At the same time, we can carry out relevant activities with the residents of the community, so that more parents can understand the existence and benefits of the institution, and actively develop and expand various sales routes, so as to strengthen some capital reserves for the future development of the training institution.

(2) Indirect channel

Network is an important channel for enterprises to contact with consumers, and it is also the key for organizations to carry out new promotion methods. Open a simple version of the network courses published on the Internet, to provide convenience for consumers, to achieve the attraction for consumers.

5.3.2. Channel development and innovation

First, appropriate advertising is placed on the fan giant platform, portal website, new media platform (jitter, B station, WeChat, etc.) to achieve the goal of product network coverage, and let potential users release tiktok and understand the company's circulation curriculum products at the first time.

5.4.Promotion Strategy

With the development of promotion activities, the customers have a deep understanding of the circulation course education of famous schools. At the same time, on the basis of understanding the customers' consumption demand, famous schools' cutting institutions promote customers' purchase desire, expand the market renewal, and establish the enterprise brand image by highlighting the characteristic advantages of famous schools' cutting institutions' renting learning machines.

(1) The first stage (the first two months)

The first stage adopts unconventional promotion. High frequency advertising in WeChat, jitter, B stations and other Internet platforms tiktok, because the business is limited, to maximize the extent of the target area of the enterprise to see the advertising. Tiktok official account and small video on WeChat are used to promote the use of video and B stations. The frequency is 2 times a week for 2 months.

Affect the psychological promotion of consumers. In the advertisement, "the senior high school entrance examination and the college entrance examination are two of the most important examinations in life. Now I don't want to focus on them. Where should I focus?" The ideal advertisement is to let all the parents who see the advertisement see it, let the parents who see it consume, and let the parents who can't make up their mind feel guilty because they don't consume. Next, the famous school cut out, let parents feel this product is a timely rain, firm parents' purchase determination.

(2) The second stage (the third and fourth months)

Let the students who have used the products of the enterprise as the media to spread the benefits of the learning tablet to the surrounding students, and realize the promotion between users. But one of the factors that must be considered is the competitive relationship among students“ This service can help me raise my marks. Why should I let other students know? " This idea is not uncommon in today's highly competitive era, and the way to solve this problem is to use prize based recommendation. When one user recommends another user to buy our service, we will give certain incentive policies to the recommender, including time free and cash feedback.

At the same time, the frequency of Internet advertising has changed to once a week for a month.

(3) The third Stage (after four months)

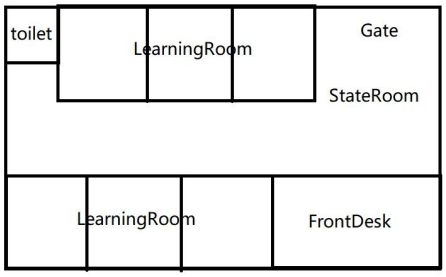
Visit the market, understand the market information and grasp the market trends. In the process of market visit, we need to constantly understand the market situation, competitors' market strategy and price changes, and market demand dynamics, so that enterprises can adjust their strategies to meet the needs of market development.

6. Operation and Human Resources Requirements

6.1. Shop

Because it is for middle and high school students, we choose to rent a 120 square shop next to middle school and high school. According to the investigation, taking Zhuhai as an example, the rental price of 120 square shops in the middle and high sides is about 8000 yuan to 9000 yuan a month, which belongs to the acceptable range. Because the supplier is an online enterprise, there is no need to consider the geographical location relationship with the supplier. Finally, we set up the shop in the office building of Sunshine Building next to Meihua Middle School. The shop covers an area of 134.4 square meters and the rent is 8800 yuan a month.

Shop is divided into 3 parts, front desk, bathroom, study room. The front desk is responsible for charge, consultation and guidance, and the study room is provided to students. The diagram is as follows:



6.2. Equipment

On the equipment, because the main responsibility of the required equipment is to play the teaching video, and it is for students. To this end, we refer to Huawei several models of tablets, namely: Mate Pad、Mate Pad Pro、M5 Youth Edition and M6. By

comparing the price and performance, we finally chose the best HuaweiMate Pad, price as a learning machine is 1899 yuan. In quantity ,6 study rooms each with a flat plate and 6 spare plates, the total price is 22788 yuan. In the tablet, we will also install software that belongs to our learning machine.

6.3. Teaching resources in equipment

For reference, the whole class price of each subject is 6999 yuan, a total of 9 subjects, the total price is 62991 yuan, a total of 6 equipment, the total price is 377946 yuan, it is obvious, It is unrealistic to buy all online resources.Therefore, in order to achieve unique and practical resources, we divide the learning resources into two parts.

First of all, for middle and high school students, the most basic part is the video collection and induction of every knowledge point on the network, in which the video can be consulted free of charge on the network.

Secondly, the exclusive part, for the high school students, we will cooperate with the high score students of the college entrance examination over the years, invite them to participate in recording the answer skills of each type of question in the examination paper, so as to serve as our exclusive resource.

For the better experience of the user, we will set up the answer link after class. The users who consume in our shop can consult the high score students for problem solving skills or professional choice problems.

6.4. Personnel

There is no need for too many people, five or six. The division of labour is as follows:

(1) Management: person is responsible for the management of the team, and the manager is responsible for the planning, execution, inspection and action of the team.

(2) Publicity: people are responsible for the publicity of the enterprise, they are responsible for the publicity and news reports of the enterprise, enhance the reputation of the enterprise, draw up the annual advertising plan, determine the content and form of advertising and make an evaluation, responsible for the construction of the enterprise platform, organize and carry out recreational activities.

(3) Finance: person is responsible for finance, do accounts, tax returns, cost accounting, feedback to managers.

(4) Reception: people are responsible for the reception work of the front desk, responsible for communication and coordination with customers, complete all kinds

of documents collection, collation, filing, binding, archiving and other custody work. Record customer information.

7. A five-year projected financial plan

7.1.Strategic plan: Set up an offline store, cost recovery within three years, set up a new store within five years, and upgrade existing stores.

7.2. Start-up capital: 900,000 yuan.
The initial capital is 300,000 yuan.
In the form of a partner to set up a company, each partner contributed 100,000 yuan, a total of 600,000 yuan.

7.3. Cost
Pre-preparation cost: 4124438 yuan
Office supplies procurement budget of 10,000 yuan
Learning machine procurement budget: 12 learner (Huawei Mate Pro, 1899 units) for a total of 22,788 yuan
Web-class resource procurement:
6999 yuan per subject, 9 doors for a total of 377946 yuan
Shop rent 8800 yuan/month
Electricity 500 yuan/month

Advertising short video platforms such as Tik Tok, invest 100,000 yuan per month, lasted for half a year, a total of 600,000 yuan

The surrounding schools release leaflets for a month with a budget of 30,000 yuan

7.4. Expected planning
(1) Product pricing (in units: yuan)

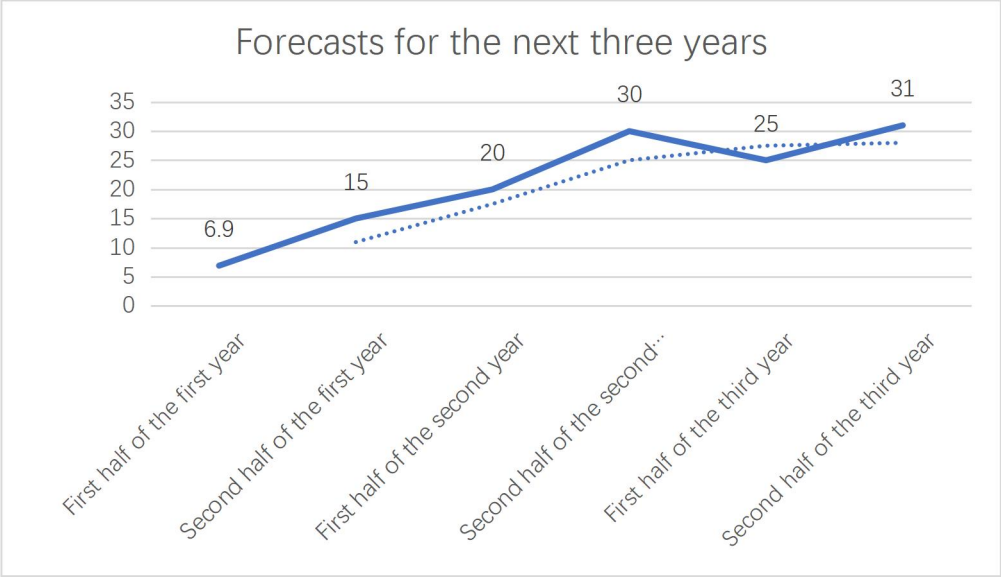
	weekday	weekend	holiday
One hour	100	100	100
One day	200	500	500
One week	1500	1500	3000
One month	6000	6000	12000
One semester	30000	30000	
One year	50000	50000	

Two months before opening, a 6.6 percent discount is used, and the two-month discount period ends with a return to the original price

Two months before opening, discounted pricing hours are used. The agency will issue 10 full 200-30 coupons and 10 8.8 percent discount rolls per day, valid for 20 days, starting from that day.

(2) Expected revenue for the next three years
Revenue is expected to be 69,000 yuan in the first half of the year
Revenue is expected to be 360,000 in the second half of the year
The second year is expected to generate annual revenue of 500,000
Full-year revenue is expected to be 560,000 in the third year

Cost recovery is projected for the third year



7.5. Risks and responses

The main risks	The source of the risk	The way to circumvent
1.There are fewer visitors	The product is less attractive	Improve product quality and increase publicity efforts
2.The cost is too high	Revenue is less than expenditure	Reduce expenses and temporarily shut down non-major businesses

7.6. Part-time member pay scale

personnel	Salary (in yuan)
Coaching staff	Hourly salary: 60
Propagandists	50 / day, bonus :50 per successfully attraction

8. Conclusion

Our business objective and plan consist of four parts. The first one Financial target is cost recovery in three years and branch opening in five years (please refer to financial plan for details). The second one social goal is to alleviate the unequal distribution of educational resources in one year, so that students who failed to become key universities can enjoy the same teaching. The third one word of mouth goal: a year and a half in the surrounding schools have a good reputation and a certain customer base. The last one utility objective is to record the ups and downs of the students& apos; scores in the sprint stage of the college entrance examination, improve the students& apos; scores in the first year, and at the same time publicize it.

In order to find the best teaching resources for children, parents may choose cram schools in different colleges, which really takes a lot of time on the road. As a result, students' demand for online learning resources is also growing. So the purpose of our company was born. We want to help students and parents so that they don't have to worry about expensive learning machines and spend more time on the road and online learning resource applications with different prices. Not limited to high school and college entrance examination courses, but in a limited time, you can freely choose a variety of improvement courses. By renting our company's unique learning machine, students don't need to spend a lot of time searching and comparing online or offline disciplines and all kinds of teachers, they can directly find the disciplines they need to start learning, so as to maximize the learning efficiency.

We hope that every child who wants to study and get high marks can have a chance to improve themselves. Through their continuous self-learning, they can rest assured of themselves and their parents!
